

Product Highlights

Challenges

- Unable to decide their requirements regarding the configurations
- Inconsistencies after migration

Benefits

- A fully automated process that results in significantly reduced data load time
- Supports configurable transformation rules to allow for customer-specific transformations
- Many folds reduced time in developing, testing and executing configuration extractions
- Customizable & reviewable configurations before loading to the destination system

The **Configuration Migrator** is a time-saving solution that automates the configuration process for Oracle PLM Cloud. Our Configuration Migrator enhances the alignment between customer groups by including and encouraging collaboration between company-wide departments according to their schedule.

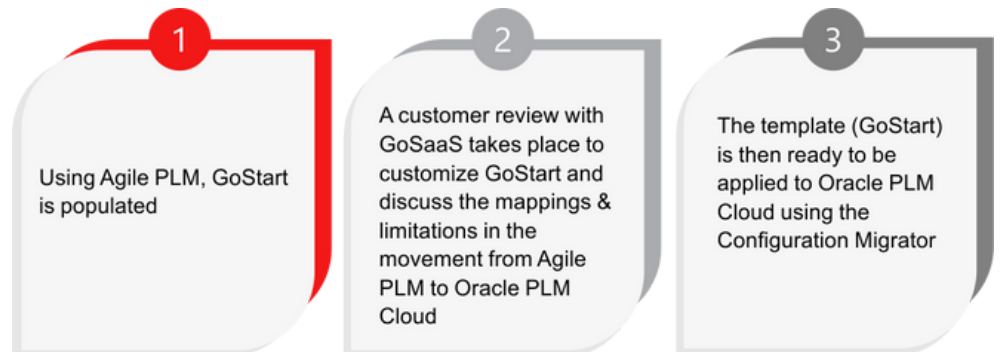

How does Configuration Migrator help?

- The transition from on-prem to Oracle PLM Cloud is easier by importing configurations from on-prem systems to a familiar spreadsheet. A spreadsheet format enables the team to evaluate the configurations and decide changes according to the needs of the company
- Allows the team to collaborate in cleaning, removing and finalizing configurations for the cloud environment
- Automatically moves configurations to Oracle PLM Cloud reducing effort and time required

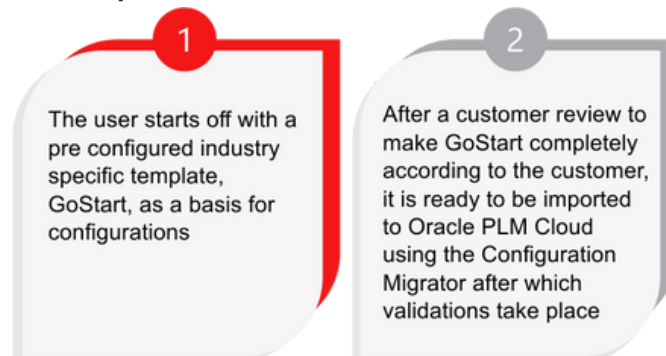

Product Highlights

- Migration of configurations includes Classes, Structure, Unit of Measure, Approved Manufacturer List (AML), Change Orders
- Three paths can be used for the migration of configurations:
 - Agile to Oracle PLM Cloud
 - GoStart to the final template (used for new implementations)
 - Dev platform to next
