

Product Highlights

Product Highlights

- Supports multiple host systems
- Has deep integration with Agile PLM
- Designed to handle large volumes of data transfer
- Leverages cloud scalability
- End to end data security
- Data accuracy ensured
- Data validations and cleaning for better data quality
- Time-efficient

The **Data Migrator** is an end-to-end fully automated solution which extracts, transforms, migrates and validates data from Agile PLM and other PLM solutions to Oracle PLM Cloud in a timely and efficient manner.

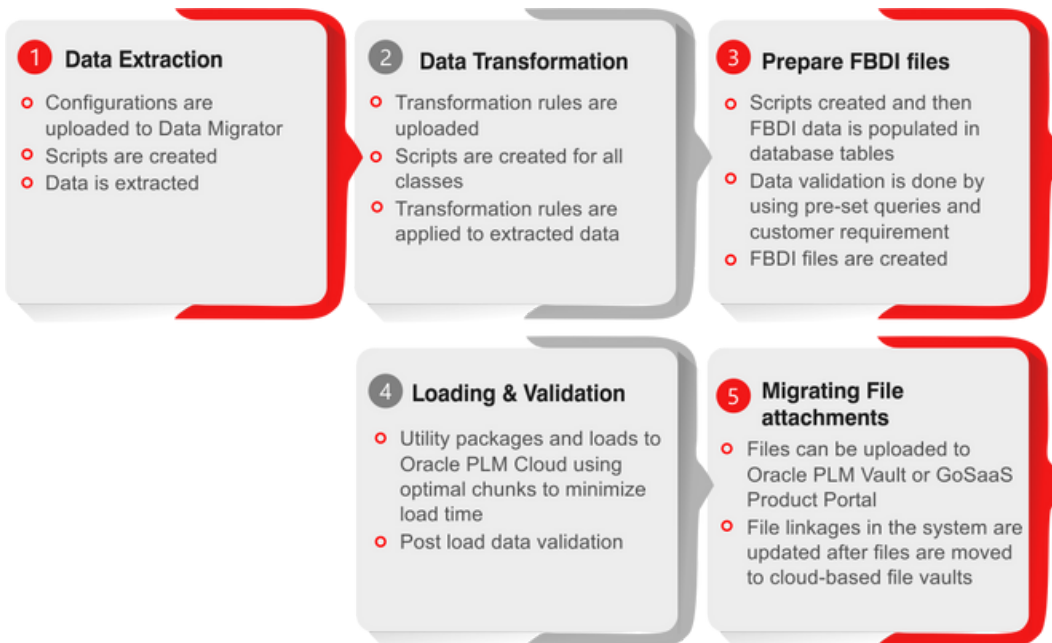

Challenges

- Migrating large volumes (terabytes) of historic PLM data (such as item attributes, manufacturers and suppliers) is a difficult and time-consuming process
- Many times source data requires cleaning before it can be migrated to Oracle PLM Cloud
- Manual files (attachments) migration results in a longer freeze time in production migrations
- Data security over the internet
- Data load optimization

Benefits

- A fully automated process that reduces errors in data extraction and load resulting in a significant order of magnitude reduction in data load time
- Many folds reduced time in developing, testing and executing data extraction scripts
- Supports configurable transformation rules to allow for customer-specific transformations to apply customized business rules
- Automated validation to identify anomalies in the data that would cause data load failures in Oracle PLM Cloud
- Post data load validation reports to certify the accuracy of the data load Linking of files with items
